Experiencing Design

Personal Development Plan

Innovator: Nguyen Minh Anh **Phase:** Immersion

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Curious, engaged listener	FROM: Passive, distracted observer
From: *(current state)*	I sometimes avoid asking questions or get distracted, so I miss useful details and chances to build rapport.	
To: *(desired state)*	I invite people to share, ask thoughtful questions, and listen closely so others feel comfortable and understood.	

Three actionable, measurable steps I can take to make this transition are:

1. Put my phone away, face the speaker, and maintain attentive eye contact in important conversations.
2. Ask at least three open-ended questions when meeting a classmate, coworker, or new person.
3. After each key conversation, write down three things I learned about the person's experience.

Two people I can have a conversation with to improve my chosen competency:

1. Tran Thu Ha - outgoing classmate with strong rapport-building skills
2. Le Quang Huy - mentor known for active listening and communication

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. TED Talk: '10 Ways to Have a Better Conversation' - Celeste Headlee

Personal Development Plan

Innovator: Nguyen Minh Anh **Phase:** Sensemaking

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Evidence-based pattern thinker	FROM: Quick conclusions from obvious data
From: *(current state)*	When I receive a lot of information, I often jump to the most obvious conclusion before looking for deeper patterns.	
To: *(desired state)*	I organize complex information, compare evidence, and identify meaningful patterns before deciding what an insight means.	

Three actionable, measurable steps I can take to make this transition are:

1. Organize notes into at least three themes or categories before making a conclusion.
2. Use an affinity map, mind map, or table for every major project to reveal patterns.
3. Require at least two pieces of supporting evidence before accepting an important insight.

Two people I can have a conversation with to improve my chosen competency:

1. Pham Gia Bao - analytical classmate who organizes information clearly
2. Nguyen Hoang Lan - professor who challenges assumptions and asks for evidence

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. Book: 'The Back of the Napkin' - Dan Roam

Innovator: Nguyen Minh Anh **Phase:** Alignment

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Collaborative shared-understanding builder	FROM: Defending my idea or avoiding conflict
From: *(current state)*	In group work, I can become attached to my own idea or avoid disagreement because I do not want to create conflict.	
To: *(desired state)*	I listen to different viewpoints, make people feel respected, and help the group reach a clear shared decision.	

Three actionable, measurable steps I can take to make this transition are:

1. Ask at least one teammate in each group discussion to explain a viewpoint different from mine.
2. Before responding to an idea, briefly summarize the other person's point to confirm understanding.
3. End key meetings by confirming the decision, each person's responsibility, and the next step.

Two people I can have a conversation with to improve my chosen competency:

1. Do Minh Chau - classmate who facilitates balanced team discussions
2. Vo Thanh Nam - supervisor experienced in resolving disagreement constructively

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. Book: 'Crucial Conversations' - Patterson, Grenny, McMillan & Switzler

Innovator: Nguyen Minh Anh **Phase:** Emergence

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Comfortable with ambiguity and testing	FROM: Needing certainty before I act
From: *(current state)*	I feel most comfortable with clear instructions and may hesitate when a problem has no obvious or predictable solution.	
To: *(desired state)*	I stay calm in uncertainty, explore several possibilities, and use small experiments to learn before choosing a direction.	

Three actionable, measurable steps I can take to make this transition are:

1. List at least three possible explanations or directions when I face an unclear problem.
2. Run one small experiment or test before making a major project decision whenever possible.
3. Once a week, reflect on one situation where uncertainty helped me discover something useful.

Two people I can have a conversation with to improve my chosen competency:

1. Bui Khanh Linh - adaptable coworker who responds calmly to change
2. Hoang Duc Anh - mentor who makes decisions with incomplete information

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. Book: 'The Lean Startup' - Eric Ries

Innovator: Nguyen Minh Anh **Phase:** Imagining

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Bold, divergent idea explorer	FROM: Choosing safe, familiar ideas
From: *(current state)*	During brainstorming, I sometimes judge ideas too early and choose familiar solutions because they seem safer and easier.	
To: *(desired state)*	I generate many possibilities before evaluating them and feel comfortable proposing unusual or ambitious ideas.	

Three actionable, measurable steps I can take to make this transition are:

1. Generate at least ten ideas in each brainstorming session before selecting the strongest options.
2. Include at least two ideas that initially seem unusual, ambitious, or unrealistic.
3. Once a week, choose one everyday product or service and create three very different improvements.

Two people I can have a conversation with to improve my chosen competency:

1. Nguyen Mai Phuong - creative friend who regularly proposes original ideas
2. Tran Duc Long - design mentor familiar with structured creativity techniques

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. Book: 'Creative Confidence' - Tom Kelley & David Kelley

Personal Development Plan

Innovator: Nguyen Minh Anh **Phase:** Learning in Action

Choose 1 mindset shift to focus on developing during this phase.

MINDSET SHIFT	TO: Rapid prototyping and iteration	FROM: Waiting for a perfect solution
From: *(current state)*	I can spend too much time polishing an idea before showing it to others because I want to avoid mistakes or criticism.	
To: *(desired state)*	I learn by doing: I build simple prototypes quickly, test them with real people, accept feedback, and improve the next version.	

Three actionable, measurable steps I can take to make this transition are:

1. Create a simple prototype or draft early instead of spending too long on a polished final version.
2. Ask at least two people to test or review each important prototype and give specific feedback.
3. After every test, record one success, one problem, and one concrete change for the next version.

Two people I can have a conversation with to improve my chosen competency:

1. Le Bao Ngoc - classmate who gives clear and constructive feedback
2. Pham Quoc Viet - mentor experienced in prototyping and continuous improvement

One learning resource (i.e. book, video, course, training) I can read to improve my chosen competency:

1. Book: 'Sprint' - Jake Knapp, John Zeratsky & Braden Kowitz
